TEK Medical Systems (TMS) offers our clients end-to-end medical solutions including a full range of products and services. We service very large organizations and smaller health care providers. TMS offers our services globally with a local presence in the United States and Canada.

As demand for Certified Refurbished medical equipment continues to increase, TMS is your proven leader for cost-effective high-quality medical imaging, monitoring and other modalities. When you are considering an alternative to new OEM equipment, consider using the TMS framework to help you PLAN, SOURCE and BUY smart; maximizing your value and minimizing your risk with Certified Refurbished.

Our management teams experience in the refurbishing and reselling of technical products is over 20 years with proven excellence and customer satisfaction. Our customers are OEMs, hospitals, imaging centers, IDNs, GPOs, pain centers, cancer centers and physician offices. Our solutions are perfect for the budget restricted healthcare providers while not impacting quality of care. All products provided by TMS including complete systems and spare parts are comparable to those of new OEM equipment yet at much needed discount levels in the range of 25% to 45% off new OEM pricing. In short, all of this makes selecting TMS as your go-to partner for pre-owned medical devices a compelling and a logical choice for all size providers.

**Valuable Savings** – Reduced prices should not mean reduced service levels, product quality or customer support. In any economic environment, TMS Certified Refurbished Equipment is a smart way to optimize your existing financial resources without hidden costs or risk to your infrastructure integrity.

**Quick Delivery** – Need it now? In-stock inventory ships within 24 to 48 hours. Quickly and reliably locate older generation or end-of-sale products which are an immediate alternative to new product lead times. Minimize downtime and project disruptions and respond quickly to unexpected needs.

**Genuine Quality** – You choose new products for their high performance, quality, support and value. When it comes to refurbished equipment - why choose anything that isn't certified? TMS Certified Refurbished Equipment is remanufactured to a standard that only an OEM can achieve. Each unit undergoes a rigorous and comprehensive ISO 9001/14001 remanufacturing and testing process. The end result is peace of mind knowing you are getting genuine performance, quality, support and value. All of this is supported by our warranty that meets or exceeds the OEMs.

**Expanded Infrastructure** – Sometimes new equipment is not an option. Some custom lab applications cannot run on newer technologies until a new revision of the application is available or the entire infrastructure has been migrated. Until then, you need the same equipment that has been qualified in your current services and your team understands. TMS Certified Refurbished Equipment is your solution. TMS has an extensive inventory of current and end-of-sale products in stock and available to ship within 24 hours. In addition, TMS has hundreds of support products that are available on a build to order basis.

**The Green Choice** – Environmental responsibility is an integral part of the way we do business. TMS Certified Refurbished Equipment is just one example of our commitment to minimizing its environmental impact.

## Our Solutions:

### Medical Devices

TMS provides our customers with fully inspected and tested products meeting all of the rigorous OEMs requirements and federal regulations. Our internal processes include a quality inspection, selection of best systems, reconfiguration, tear-down and assembly, test, review and final quality inspection. Once a product has been determined to be acceptable for re-sale, the TMS team works with our customers to make sure we fully understand the health care requirements which include intended use, volume, technical requirements, training requirements and post-sales support. The TMS post-sales support includes onsite training by an OEM trained professional, remote technical support and warranty management.

### Imaging Equipment

- MRI
- CT Scan
- C-Arm
- Ultrasound
- X-ray and Interventional X-ray
- PET and Nuclear Medicine

## Patient Monitors

Cardiac  
 Hemodynamic & Respiratory  
 Patient Vital Signs and Anesthesia Monitoring  
 EKG  
 Electrosurgical Units  
 Endoscopic Light Sources and Processors

## Blood Molecular

Analytical Bioanalyzer	Plate Handling
Fluorometer Liquid	Plate Washer
Handling Luminometer	Robotic / Automation
Microscope / Imager	Spectrometer – Multi-Well
Multi-mode	UV-Vis
	Visible

## Technical Services

Technical services are an integral part of TMS's solutions. Our ability to perform services at the customer location separates TMS from our competitors. TMS has the ability to provide professional dis-assembly and removal of the most technically complicated systems and machines. In addition to removal services, TMS also has the ability to perform on-site testing and refurbishing of imaging and patient monitoring devices. In the event of a removal of a device or system, TMS works with our network of logistics and packaging professionals to ensure all products are handled with care and meet quality standards for packaging and shipments.

## What We Do For Your Success

- Decommissioning and Removal Services
- On-Site Repair and Refurbishment
- Warranty Management
- Product and User Training
- Remote Technical Support

## About TEK Medical Systems, LLC.

Founded in 2013, TEK Medical Systems provides Original Equipment Manufacturers, Contract Manufacturers and End-User customers with comprehensive support services for legacy and next generation medical devices and support services. Located in the United States and Canada, TMS services customers globally with best-in-class products and technical services.
